### ***DETAILED ACTION***

1. The request filed on August 29, 2008 for a request for continued examination (RCE) under 37 CFR 1.114 based on patent application 10/665,879 is acceptable and an RCE has been established.  
Claims 1-29 are presented of which claims 1, 11 and 21 are independent claims. Claims 1-9, 11-19 and 21-28 are amended.

### ***Priority***

2. This application does not claim priority. Therefore, the effective filing data for the subject matter defined in the pending claims of this application is 09/19/2003.

### ***Allowable Subject Matter***

3. **Claims 1-29** are allowed.
4. The following is an examiner's statement of reasons for allowance:  
All independent claims **1, 11 and 21** are amended.  
  
Regarding the independent claims 1, 11 and 21, the art on the record, in particular **Bertram discloses a method for controlling remote desktop access provided by an interactive grid computing system comprising:**
  - **Determining user policies** (*see on column 11, lines 52-column 12, lines 26, "the different settings for the policy"*) **based on a classification of a user** (*user allows access to local resources based on group membership or also see*

*"roaming user group on the Windows NT"); [column 11, lines 52-column 12, line 26 and see figure 8, ref. Num "86"]*

**and**

- **providing a dynamic user account to said user, [Column 11, lines 42-51 and column 12, lines 18-26] (*The present invention thus implements "dynamic" local accounts on the client machine. A dynamic local account is a user account that is created on the local Windows NT workstation when a user logs on to a location other than a Windows NT. As discussed above, a local account is created after the user is successfully authenticated on the remote logon server. The account gives the user valid security credentials on the local workstation. And on column 12, lines 18-26, the following has also been disclosed. "This is determined by checking to see if the user is part of the Roaming Users group on the Windows NT client. This was set as part of the dynamic creation of the user account."* And on column 15, lines 48-52, the following has been disclosed, "The domain drivers are the modules that provide a set of common functions used by authentication, discovery, user profile storage and retrieval, logoff, **dynamic user account creation**, and dynamic user account management.")**

- **wherein said dynamic user account is customized based on said user policies to limit access to resources on a remote desktop. (*See figure 14, "customize the list of other domains..." and column 8, lines 54-61 and column 9, lines 17-26 and claim 8, see, Applying a set of one or more policies to customize the list prior to presenting the list to a user seeking authentication. And on***

column 11, lines 42-51, the following has been disclosed. "A **dynamic local account** is a user account that is created on the local Windows NT workstation when a user logs on to a location other than a Windows NT. As discussed above, a local account is created after the user is successfully authenticated on the **remote logon server.**" Furthermore on column 8, lines 57-61 the following is disclosed indicating the fact that the customizing is also done by the users other than *administrator*. "**Thus, for example, if the administrator sets an appropriate policy, a user may enter or "customize" his or her own particular authentication location(s), Which significantly enhances the flexibility of the overall system.**"[See column 8, lines 57-61]

However as applicant's representative persuasively argued, **Bertram** the reference on the record, does not disclose the functional limitation incorporated in the submitted amended **independent claims 1, 11 and 21.**

For instance,

The invention particularly implements "dynamic" local accounts on the client machine. A dynamic local account is a user account that is created on the local Windows NT workstation when a user logs on to a location other than a Windows NT. Furthermore, a local account is created after the user is successfully authenticated on the remote logon server. The account gives the user valid security credentials on the local workstation," [Col. 11, lines 43-51]. However, Bertram creates a local account on a client machine, where the client machine may be accessed by a user, **which is found to be different from**

Art Unit: 2132

**"reserving said executable node and said at least one requested application," as recited in the amended claim.**

None of the prior art of record taken singularly or in combination teaches or suggests applicant's invention, which is generally a specific method for controlling access in an interactive grid environment comprising, the functional limitation (added with amendment) with the combination of other limitation recited in respective independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submission should be clearly labeled "Comments on Statement of Reasons for Allowance."
